FOR SCREENING PURPOSES AND GROUPING.

We have a quantity of trees that cannot be called first class, but for screening or group planting are very desirable. While the bodies are a little scarred and not quite straight and the tops are not perfectly shaped, in time they will become perfect in nearly every particular. These trees are from 15 to 30 feet high, 2 to 8 inches in diameter, and have been transplanted several times. The prices are one-half what first-class trees would cost.

Herbaceous Plants.

Each will be an individual plant, not divided, and guaranteed true to name.

 This line with us is a special department, and is under the control of an expert grower, whose every effort is and will be to produce plants equalled by no one. We are making great advances in the growing, handling and shipping of herbaceous plants. We have over sixty varieties of field grown Phlox—we believe the largest stock in this country (varieties are given on pages 26, 27 and 28), to which special attention is called.
